Best Flashlight App for Power Outages at Home

When the power goes out, you need a flashlight that works instantly — no ads, no loading, no internet required.

The First 30 Seconds of a Blackout

The power goes out. Everything is dark. You reach for your phone. In those critical first seconds, you need light immediately — not an app that takes 5 seconds to load while it fetches ads, not a flashlight buried three swipes deep in your settings.

A good flashlight app for power outages must be: instant to launch, reliable without internet, easy to find on your home screen, and capable of lasting as long as the outage does.

What You Need During a Power Outage

- **Instant on** — one tap and light. No splash screens, no ads, no loading.
- **Offline operation** — cell towers may go down during widespread outages.
- **Auto-off timer** — conserve battery. You do not know how long the outage will last.
- **Screen light mode** — a soft screen glow is better than a blinding LED for navigating your home.
- **SOS mode** — signal for help from a window if needed.
- **No ads** — ads require internet and block your screen exactly when you need the light.

OneTap - Flashlight & SOS for Power Outages

OneTap - Flashlight & SOS is ideal for home blackout situations:

- **One-tap activation** from home screen widget.
- **LED torch** for finding the fuse box.
- **Screen light** for gentle room illumination.
- **Timer** to conserve battery during long outages.
- **SOS** to signal from a window.
- **100% offline, no ads**.

Install OneTap for iPhone or OneTap for Android before the next storm.
