Best Flashlight Widget App for iPhone Home Screen

Skip the Control Center. A home screen widget turns on your flashlight with one tap — faster than anything Apple offers built-in.

Why a Flashlight Widget Beats Control Center

On iPhone, the default way to turn on the flashlight is to open Control Center — swipe down from the top-right corner (or swipe up on older models) and tap the flashlight icon. It works, but it takes two steps and requires precise swiping. A home screen widget eliminates the swipe entirely. One tap, light on.

How iPhone Flashlight Widgets Work

Since iOS 14, Apple allows apps to place widgets on the home screen. A flashlight widget sits right on your main screen, always visible, always one tap away. No unlocking, no swiping, no navigating menus.

Benefits of a flashlight widget

- **Instant access** — one tap from your home screen or lock screen.
- **No swipe needed** — faster than Control Center.
- **Customizable** — some apps let you choose what the widget does (LED, screen light, SOS).
- **Works alongside other widgets** — fits naturally into your home screen layout.

Our Pick: OneTap - Flashlight & SOS

OneTap - Flashlight & SOS includes a home screen widget that activates the flashlight with a single tap. No ads, no delays, no internet required.

- **One-tap widget** — fastest flashlight activation on iPhone.
- **LED torch + screen light** — choose your light mode.
- **SOS and strobe** — accessible from the app.
- **Auto-off timer** — set it and forget it.
- **No ads, no tracking** — pure utility.

Download OneTap for iPhone and add the widget to your home screen.

How to Add the Flashlight Widget

1. Install OneTap - Flashlight & SOS from the App Store.
2. Long-press on your home screen until icons jiggle.
3. Tap the + button in the top-left corner.
4. Search for OneTap and select the widget size.
5. Tap Add Widget and position it wherever you like.

That is it. Your flashlight is now one tap away, always.
