The Problem with Marine Apps: Subscriptions Everywhere

If you have spent any time searching for a **free marine GPS app for iPhone**, you have probably noticed a pattern: most capable marine apps cost money. Not just a one-time purchase — ongoing monthly or annual subscriptions. Navionics charges a yearly fee for chart access. Full-featured navigation suites can run $15-40 per month. Even apps with so-called free tiers often restrict the most useful features behind a paywall.

For sailors, motorboat owners, and kayakers who just need reliable GPS speed data and anchor protection — not a full chartplotter — this pricing model is frustrating. You end up paying for a massive suite of features when you only need two.

That is where **Boat Knot Meter: Anchor Watch** stands apart. It is completely free, has no subscription tier, no in-app purchases, no ads, and no data collection. It does two things extremely well: measures your speed in knots (and km/h and mph) using GPS, and monitors your anchor position with an alarm. No more, no less — and it never asks you for money.

Download Boat Knot Meter free on the App Store and stop paying for features you do not need.

What Boat Knot Meter Gives You for Free

GPS Speed Meter in Knots, km/h, and mph

The speed display is large, clear, and updates in real time. You see your current speed in all three units simultaneously — knots for navigation, km/h for passengers who do not use nautical units, and mph for those accustomed to the imperial system. Whether you are sailing, motoring, or paddling, the reading is always there.

Anchor Watch with Custom Alarm Radius

Set your GPS position as an anchor point, choose your alarm radius, and Boat Knot Meter monitors your position continuously. If you drift beyond the boundary, an audible alarm fires — loud enough to wake you from sleep.

Trip Logging

Your route, speeds, and distance are recorded for every trip. Review your passage log after a sail — maximum speed, average speed, distance made good.

Complete Offline Operation

Boat Knot Meter uses only your iPhone GPS chip. It works in the middle of the ocean, in fjords, on remote lakes, anywhere your boat goes.

No Account Required

Install it, open it, use it. No email, no password, no profile.

Why Free Marine Apps Often Disappoint

Free marine apps tend to fall into two traps. The first is advertising: banner ads and pop-ups that interrupt your workflow. The second is crippled functionality: the anchor watch only works for 30 minutes before a premium upgrade prompt. Boat Knot Meter avoids both traps entirely.

Who Benefits Most from a Free Marine GPS App?

Weekend Sailors

If you sail on weekends and coastal passages, you probably do not need a monthly chartplotter subscription. You need accurate speed data and anchor protection. Boat Knot Meter delivers both.

Kayakers and Paddleboarders

Paddle sports enthusiasts need to know how fast they are moving and possibly monitor their beached kayak. Boat Knot Meter is purpose-built for exactly this use case, without the complexity or cost of a full marine suite.

Download the Best Free Marine GPS App for iPhone Today

Get Boat Knot Meter free on the App Store right now — it costs nothing, installs in seconds, and provides professional-quality marine GPS tools that work anywhere in the world without a subscription, account, or internet connection.

Download Boat Knot Meter for iPhone now and experience the difference a genuinely free marine GPS app makes.
